

### TROLLEYS FOR SLAUGHTERHOUSE

### **Description:**

Trolley or Roller for plate track in slaughterhouses, slaughter rooms and factories of sausages and meat products.

The sheaves are made entirely of AISI-304 Stainless Steel with a wheel made of the latest generation plastic material. The wheel is highly resistant to impacts, wear by friction and rotation on the axles as well as pinching in changes of direction.

Hooks of different diameters can be attached to the Sheaves with and without swivel or rollers. The hook, at its junction with the sheave, has a bronze washer attached to facilitate the rotation of the hook on the sheave.

### Advantage:

- 1. Different dimensions to adjust to the maximum to your needs and budget
- 2. The plastic wheel avoids the tedious daily lubrication work
- 3. There is no precipitation of metal chips or fat on the carcass
- 4. The appearance is unbeatable since they do not rust
- 5. Increased durability
- 6. Less weight than conventional ones
- 7. They can be washed and sterilized automatically with hot water
- 8. Withstands temperatures between -22 °C and +200 °C, so it can be used for frozen and for slaughtering pigs in automatic lines with a Flame Oven.

### Technical data:

- Body: AISI-304 stainless steel folded plate of manufacture and European regulations
- Shaft: European-made AISI-304 stainless steel
- Wheel: Made of food-grade plastic material with high resistance to friction and impact.

#### Models:

	SMALL (S150211)	MEDIUM (\$150212)	HD (S150214)	XL HD (\$150215)
Total Length (mm) including hook	450	500	500	505
Plate width (mm)	40	40	50	40
Plate thickness (mm)	10	12	12	15
Wheel diameter (mm)	100	100	120	120
Recommended hook (mm)	14	16	18	18
Static load capacity (kg)	236	236	540	540
Dynamic load capacity (kg)	540	540	1.140	1.140
